## NEWS 03

ALL THE LATEST NEWS ON OUR  
REFRIGERATION & AIR CONDITIONING PRODUCTS

### MRC+100 single phase launch

Marstair has launched and received its first order for a MRC+100 single phase unit. The unit has a capacity of 7.1kW at -10C evaporating and a 32C external ambient. This further increases the already extensive range of Marstair refrigeration products and allows larger refrigeration display cabinets to be matched with Marstair's popular refrigeration condensing units with a single phase supply.

If you would like further information on any Marstair product please contact our sales department on **01484 405666**

### Marstair sells systems into China and Kenya

Marstair's unique product range continues to create demand from all parts of the world. Marstair has a long tradition of exporting its robust air-conditioning and refrigeration systems throughout Europe and beyond due to the wide ambient envelope its products can operate in. The units supplied are a DCU+80 system matched with WM80 wall mounted evaporator into Beijing China and 4 MCU+90 systems matched with the WM100L wall mounted evaporators into Nairobi Kenya.

### Marstair wins large close control projects

This summer Marstair have sold 8 CD3 systems for use in a FIFA broadcasting centre, the units are being used to control the temperature and humidity of the centres vast audio and visual equipment. The units were made specifically to the customers requirements using the wide range of features and options available with the CD3 product including painted specifically to the customers colour requirements.

Marstair has developed and sold CD3 020 units specifically for a media organisation located in La DEFENSE, Paris with two independent cooling circuits, both individually give 100% of the cooling requirements to ensure total security (see pic above).

### Marstair sells its first CO2 cassettes

MARSTAIR HAS SOLD ITS FIRST CO2 EVAPORATORS FOR USE IN A LARGE SUPERMARKET CHAIN.

The units are based on Marstair's 875 cassette units and are tested to 75barg, allowing a maximum operating pressure of 44barg. The units are running off the stores main CO2 plant equipment and are providing low temperature cooling down at 10C.
